Shoulder and Elbow Specialist

Benjamin Service, MD, FAAOS

Wound Care: Zipline closure. This special closure holds the skin together without sutures or staples in the skin to minimize scarring, yet still offer excellent wound healing.

Keep the incision(s) clean and dry until the **4th day after surgery**.

Please DO:	Please Do NOT:
<ol style="list-style-type: none">1. Change the bandage to dry gauze (4x4's) dressings daily and as needed, starting 4 days after surgery. Hold the gauze in place with medical tape or coverlet.2. Keep the incision covered with gauze for 2 weeks.3. Remove dressing before showering on the 4th day after surgery4. After showering, place fresh dry gauze on the incision when skin is dry.5. Hold the gauze in place with Medipore tape.6. Examine the incision daily for: redness, opening, drainage of fluids (blood, pinkish fluid, or pus), and swelling.	<ol style="list-style-type: none">1. Please do not place cream or ointment on incision.2. Do not remove the Zipline from the shoulder before the first appointment, or the incision could have healing problems.

- If there is an emergency, please call **911**.
- If you are concerned about the incision, please call our office at 321-842-0060.
- If you have an urgent concern about the wound during non-business hours
 - Call the Orthopedic resident on call at **321-842-0060, option 2, & option 2 again.**

Showering

Please DO	Please DO NOT
<ol style="list-style-type: none">1. Please cover incision site with plastic wrap if taking a shower during the first 3 days after surgery.2. On the 4th day after surgery, you can shower with the incision(s) wet.3. When showering, let the soapy water run over the incisions—do not scrub.4. Pat dry and allow to air dry about 10 minutes before placing new dressings.5. Replace the bandage with clean dry “4 x 4” gauze bandages and secure with medical tape.	<ol style="list-style-type: none">1. Do not swim or bathe with the surgery site or incision(s) under water until cleared in the office.

Zipline Removal

The Zipline should be removed in the office **2 weeks after surgery** and replaced with steri-strips. If the incision is well healed, normal skin care can start **3 weeks after surgery**.
